To Design a Chameleon...

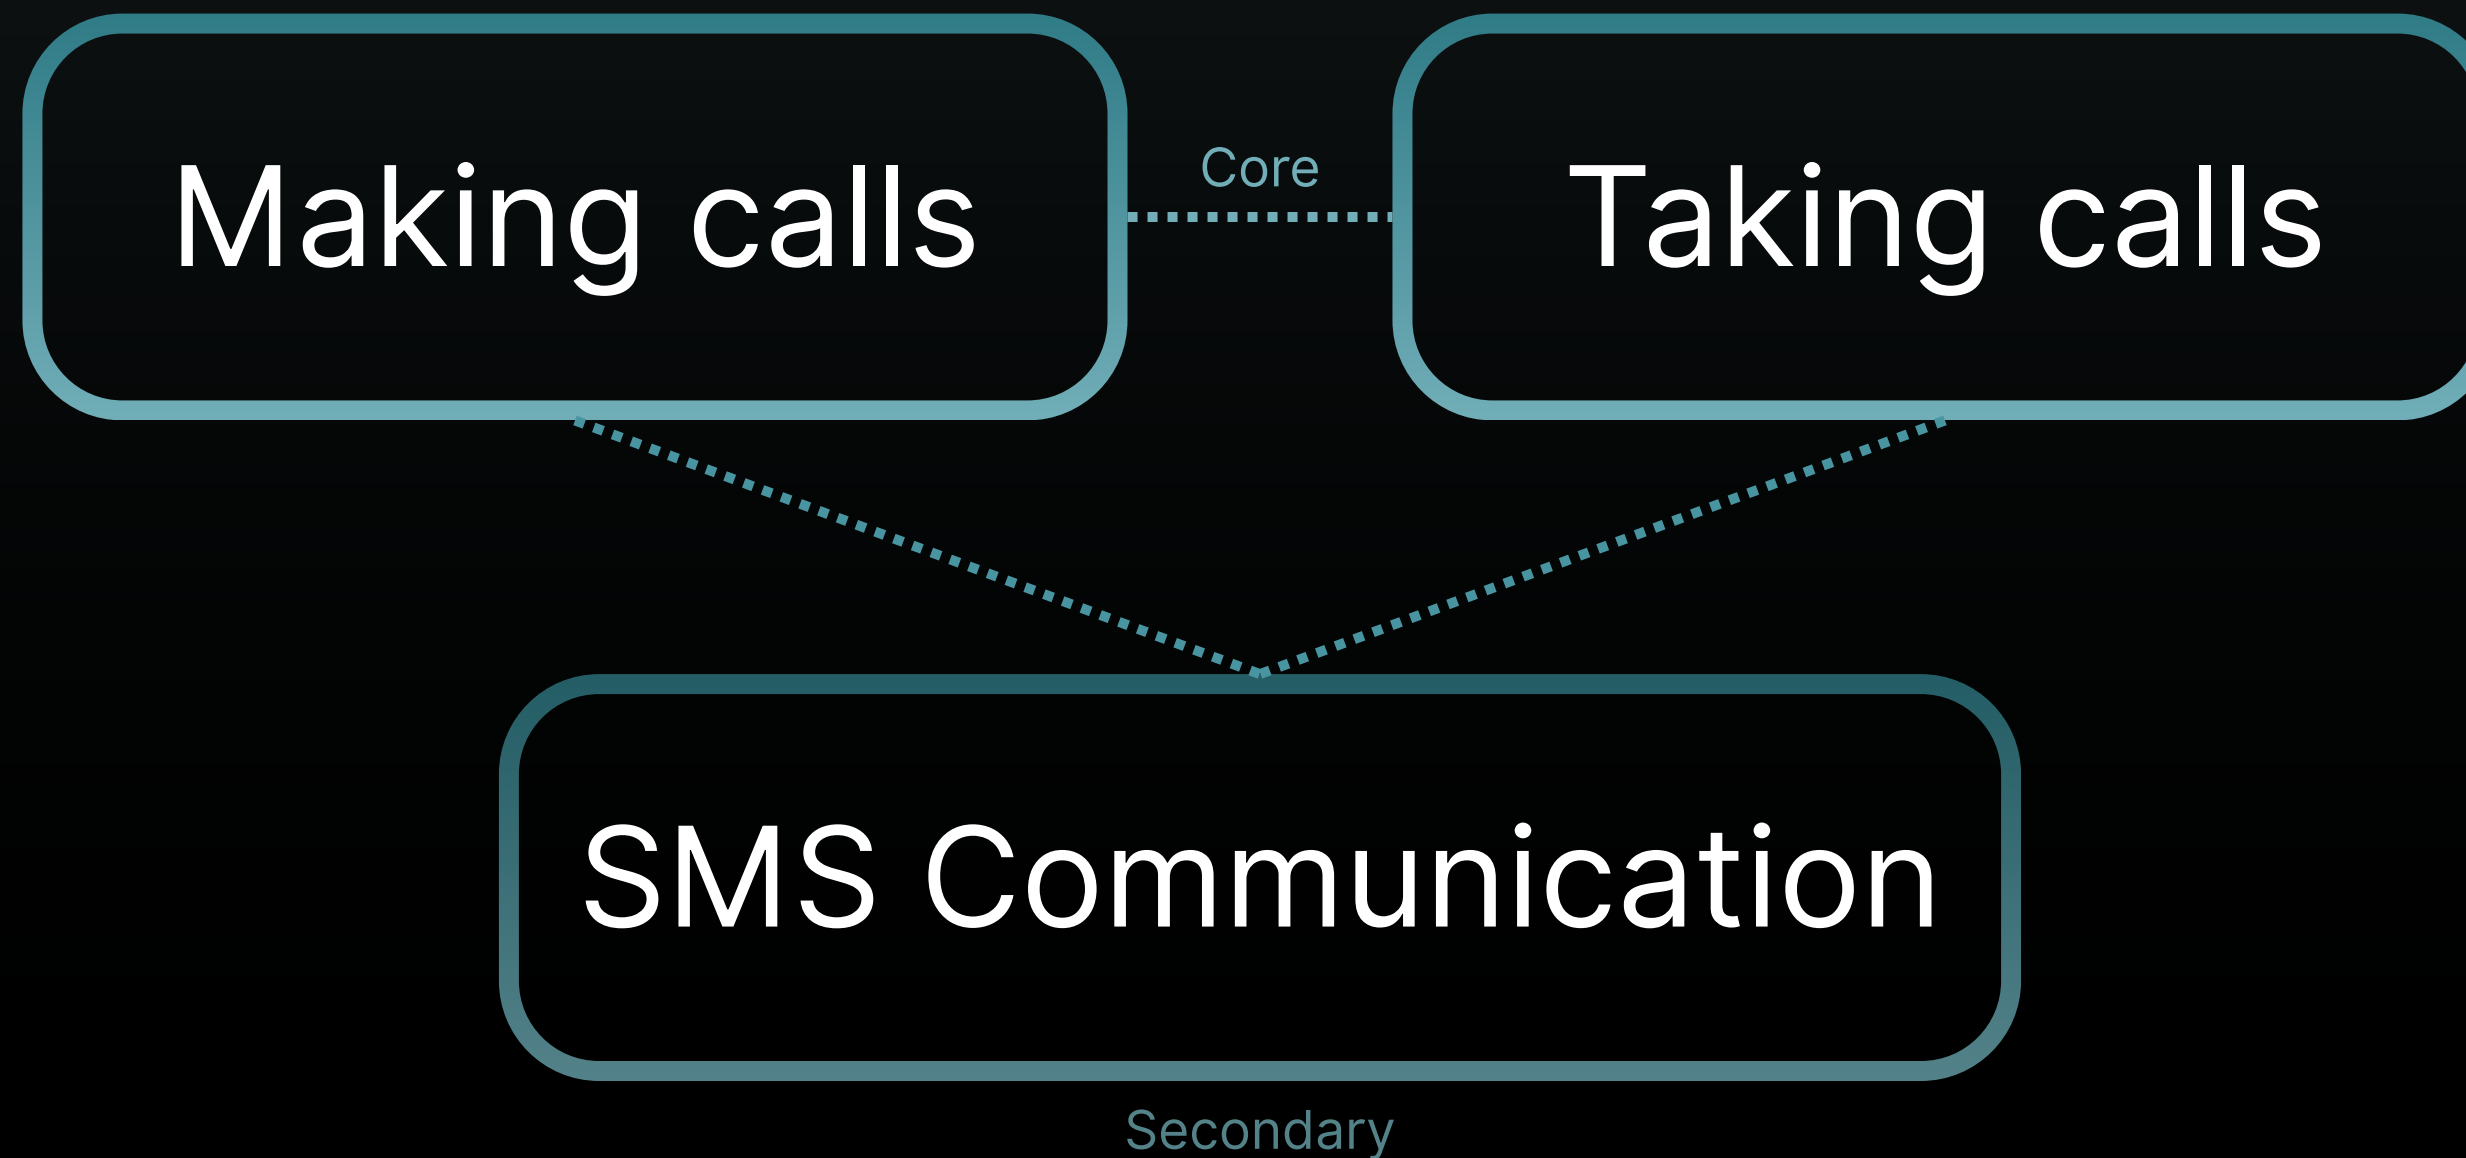

**I cannot make it adapt to a rainforest, but I can
design it for change and watch it roam**

What could this “Chameleon” be?

A semi-autonomous personal agent for all social task needs

All the menial calls of everyday life

Follow-ups

Appointment Booking

RSVP Calls

Simple Inquiries

Making Reservations

Voice Messages

Rescheduling

Delivery Confirmations

Handled with the click of a button

So what is Relay exactly?

- Relay is **not an API**
- Relay is **not an AI chatbot**
- Relay is **not another AI assistant**
- Relay is **an integrated service layer**

The Foundation: How Might We...

- Give people more choice in how they communicate?
- Adapt human connection into a new age of technology?
- Maintain personal autonomy with new communication technology?
- Prepare a shell for developing AI technology before it is unleashed without aim?
- Encourage a healthier way of interaction between humans and AI for the future?

What is Relay the answer to?

What if it's not as binary as “speak or don't speak”?

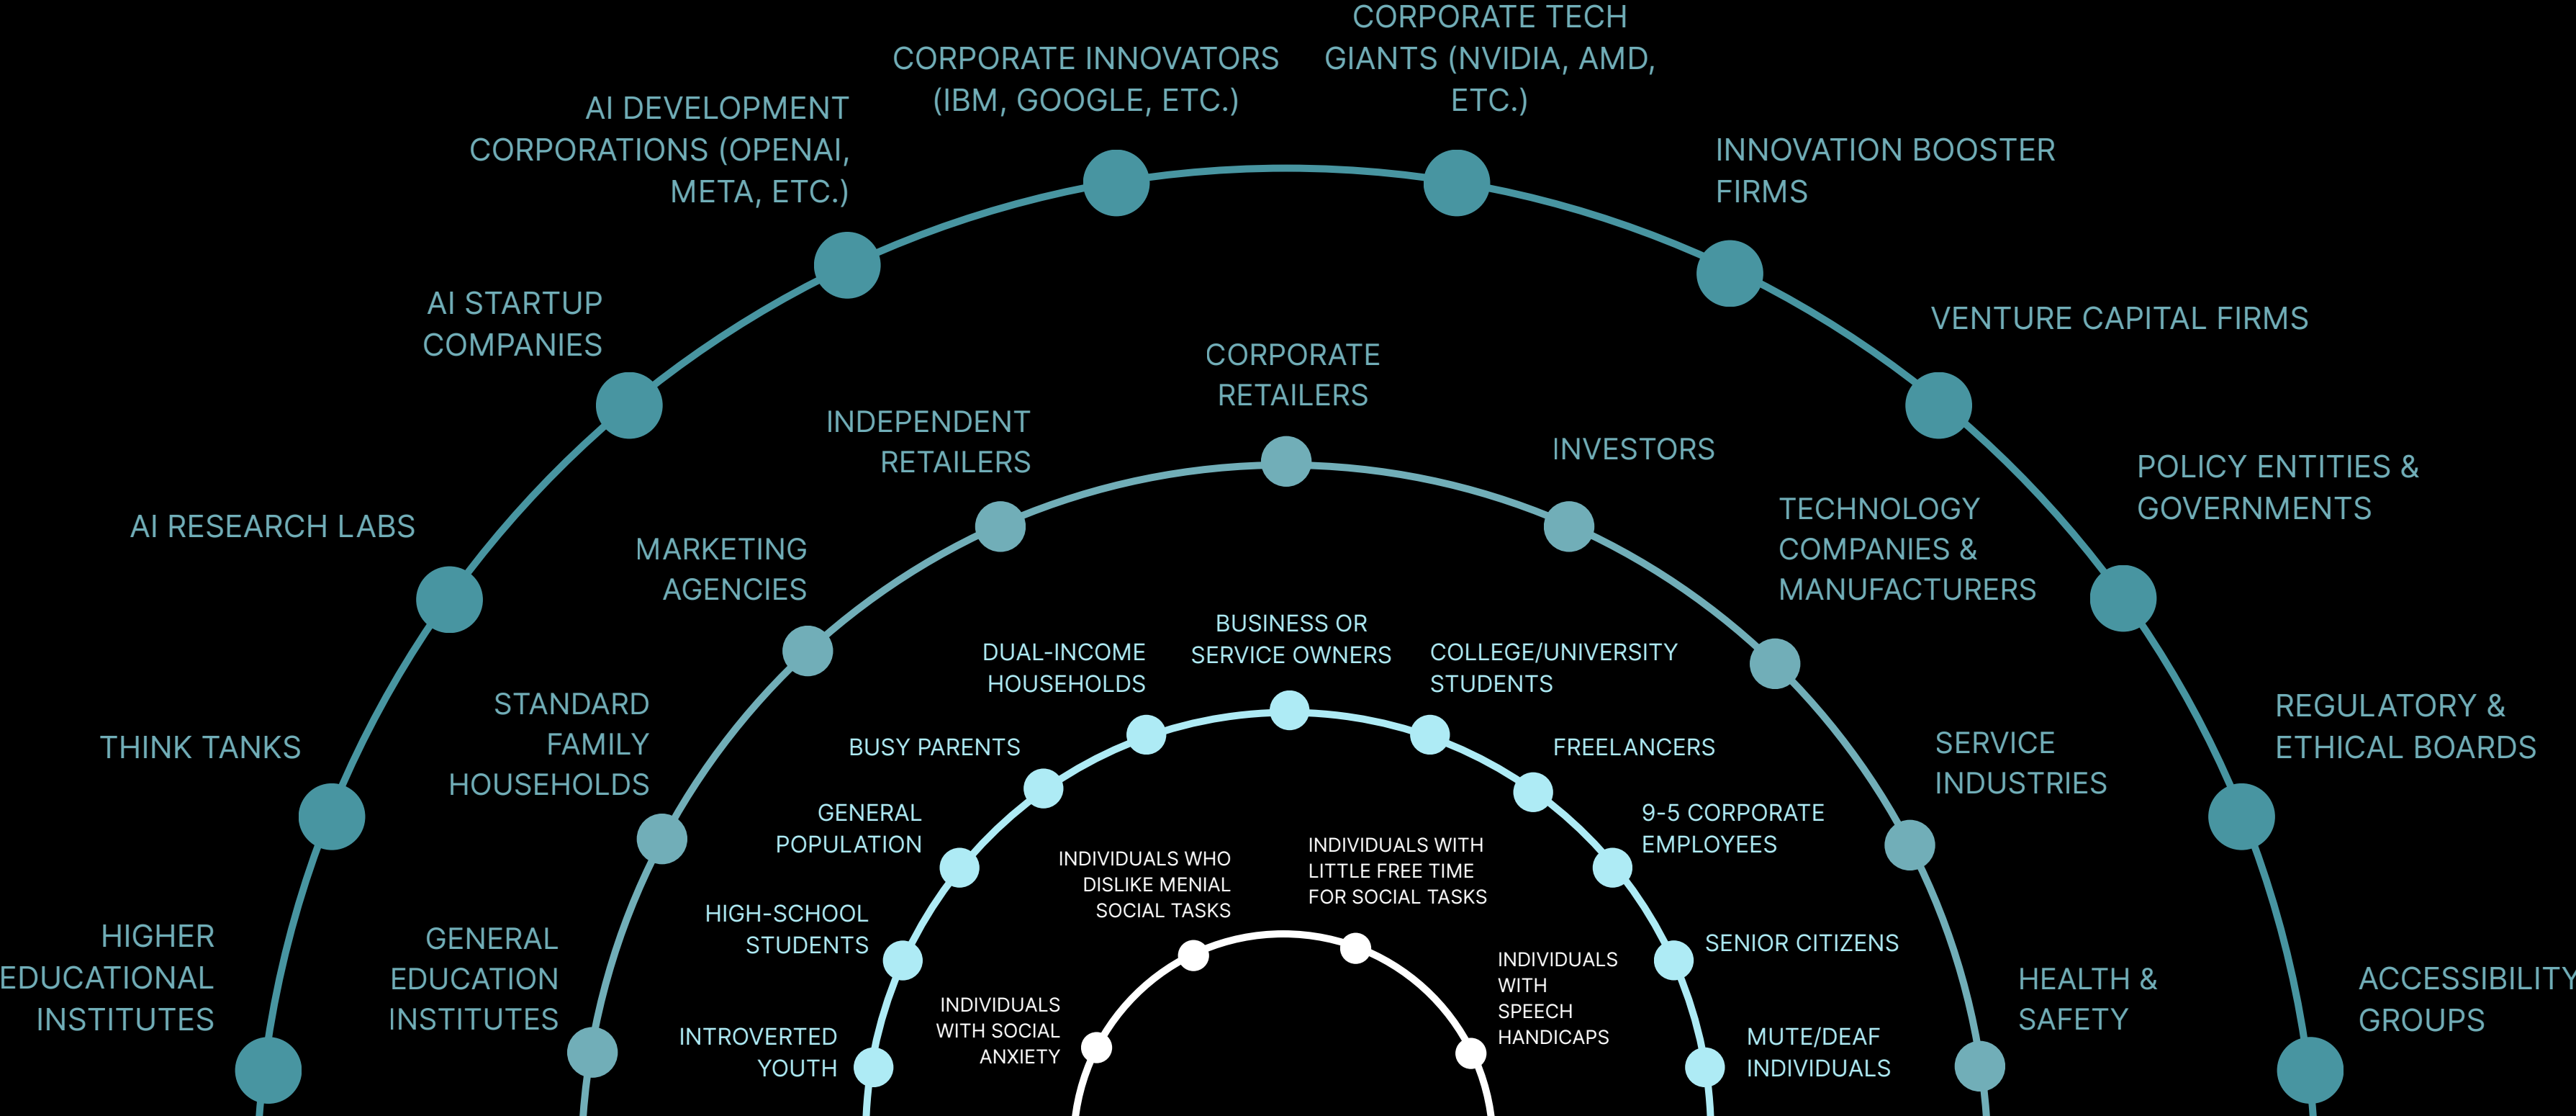

**What if instead of simply calling or declining, we have
a third option?**

**What if we reinforce the idea of AI being a
communicative tool?**

Full Stakeholder Map

I know the **who**

I am proposing the **how**

I need to know if my **how** answers their **what**

Three-part Experiment

(in progress)

Casual Conversation

10 short, casual
conversations about
autonomous call
reception

5 will be asked about
an AI solution, 5 will
not have AI mentioned

Deep Conversation

1 deep conversation
about solutions to
mandatory social tasks

Member of core
audience

Physical Experiment

Personally assume role
of agent in practical
sense for someone
else

Member of secondary
stakeholders

*Also possible to simulate simply
by using ChatGPT's AI voice
feature

Final Product

**The Chameleon is now designed for
change...**

**...But what is its place in the
ecosystem it is changing?**

Thank You
