PROFILE

Designer trained in industrial design with experience across startup, agency, and enterprise-client work. Focused on understanding core problems to build deeply researched solutions for after. Works in Figma, Adobe Creative Suite, and Antigravity while using multiple Generative AI tools for building, prototyping, and website auditing.

EDUCATION

OCAD University | Bachelor of Design (Honours), Industrial Design *2026*

WORK EXPERIENCE

cnpt.ca | Product Manager & Research Lead
Sep 2026 – Present

Early-stage design studio delivering design solutions for pre-seed startups and independents

- Serving as the lead QA: auditing websites/apps and directing developer fixes before clients see it
- Built a Zapier-to-Notion pipeline that auto-sorts client inquiries into a shared database so no lead is missed
- Leads client presentations and prepares documentation

Highline Beta | Junior Designer
Oct 2025 – Nov 2025

Redesigned how venture capital firm staff network at events on a tight budget in 2 months

- Staff were stuck between awkward phone exchanges and flimsy QR-code cardstock; replaced both with an affordable NFC wristband and built 2 working prototypes in 1 week
- Pushed the brief beyond a physical object, proposing AI tools that capture attendee LinkedIn profiles for follow-up, and a post-event dinner format drawn from Chinese guanxi culture
- Designed both to scale into an interest-based event ecosystem; backed the pitch with market and trend analysis and a Figma UX roadmap; all 3 concepts were considered for development

iEmbrace | Product Designer
Feb 2025 – Sep 2025

Designed a meditation device for a mental wellness startup

- Hired after the startup lost its lead industrial designer; gave management a new, more polished visual direction through high-fidelity renders and a client-ready prototype (Fusion 360, Blender) delivered in 2 weeks
- Backed the redesign with material research and competitor analysis, presented 15+ iterations to stakeholders, and routed new feature ideas through project managers to the team building the companion Bluetooth app

Cadillac Fairview | Student Service Designer
Sep 2024 – Jan 2025

Service design project for Sherway Gardens

- Client wanted a “lively space” for newcomers to Canada; led a 5-person team’s on-site research and found the mall empty on Saturday at peak time, missing the teens and young adults who drive word-of-mouth
- Traced the gap to weaker transit access compared to its main competitor, Square One, tying the vague brief to future condo developments planned around the BIA
- Gave the client a candid assessment, then refocused the project on loyalty through seasonal events rooted in Canadian culture; lead presenter across 4 client presentations

PROJECT EXPERIENCE

GradEx Thesis Project | Solo Product Designer
Sep 2025 – May 2026

Relay + Switchboard, an AI system that answers and sorts phone calls on a person’s behalf

- Designed every screen in Figma (components, auto-layout), then built a full-stack prototype using AI tools
- Ran a week-long Wizard-of-Oz study, personally handling live calls, and turned the pattern it revealed (every call follows one opening before splitting into client, friend, or unknown) into the core routing flow
- Iterated the direction several times on advisor and peer feedback, including a pivot after usability findings

Other UI Work: Spotify mobile app redesign, Glass Factory app prototype, NexusBuilds PC-building service

SKILLSET

Design Workflows: Figma, Adobe Creative Suite, wireframing, systems thinking, mobile design, UI/UX prototyping
Research & QA: Contextual research, usability testing, journey mapping, service blueprinting, website QA auditing
AI Literacy & Tools: Claude, Cursor, Stitch, Antigravity, Firebase, Midjourney; English (fluent), Cantonese (basic)
